Recall Space Mannheim 2026-11-09

Dear Recall Space team,

I am applying for the working student position in Software Development (AI / Full Stack). You give bonus points for your own coding projects and a GitHub profile: my latest project, DocuMind (github.com/Rayyan3079/documind-rag), is an LLM application I built with a Python backend, tests and CI.

I am an M.Sc. Data Science student at TU Ilmenau with a B.S. in Artificial Intelligence. Before my Master's I worked with procurement and supply chain data on SAP platforms, which is close to the purchasing and sales processes your platform supports.

- **Python backend,** DocuMind serves a CLI, a FastAPI REST API and a Streamlit UI, with 37 offline unit tests, GitHub Actions CI and Docker
- **LLM quality,** it answered 91% of a 22-question test set correctly and refused all 4 unanswerable questions; I traced both wrong answers to their cause
- **Procurement data,** as an intern at Tapal Tea I analysed company purchase data from SAP reports and wrote SQL queries to integrate it into dashboards

I would help build backend features in Python, test and debug existing features and research new AI tools. The JavaScript frontend, your cloud setup and agent frameworks are new to me, and I am keen to learn them in your team.

I am willing to relocate to Mannheim and can work up to 20 hours per week, starting immediately. I would be glad to discuss the role.

I work in English (IELTS 8.0) and am currently learning German (A1).
